DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kimura et al, herein will be referred to as Kimura I, (US 5,508,793), and further in view of Kimura et al, herein will be referred to as Kimura II, (JP 11-352758).

As regards to claims 1 and 4, Kimura I teach an image forming apparatus and its controlling method having a toner recycle mechanism, wherein rotational torque of a stirring member disposed within a developing device and capacity of a recycle toner within the developing device are detected, with the rotational torque of the stirring member is elevated and the capacity of the recycle toner is increased, control operation for not changing a development bias voltage and lowering rotational speed of the stirring member is executed (figures 1, 5, 7-9, 10 and 12; column 2, lines 10-50, column 7, lines 5-67, and column 11-13). However, Kimura I do not specifically teach control operation execution for not changing rotational speed of the stirring member during elevation of the rotational torque of the stirring member, and no increase in the capacity of the recycle toner. Kimura II teach control operation execution for not changing rotational speed of the stirring member during elevation of the rotational torque of the stirring member, and no increase in the capacity of the recycle toner (see abstract). would have been obvious to one of ordinary skill in the art at the time the invention was made to adapt Kimura II teaching with the teaching of Kimura I increasing efficiency and reducing operation cost.

As regards to claims 2, 3, 5 and 6, Kimura I teach a level sensor to measure height of the developer, and also teach supplying the recycled toner to the developing device (figure 5, 7, 10 and 12).
